ENABLING SAFER HEALTHCARE
On Time and On Budget

HPS provides Infection Prevention & Control and Environmental Hygiene expertise to Architects, Builders, and Healthcare providers, for Facility Development projects.

Without ever losing sight of the patient-resident, we enable your facility development projects to be completed faster, safer, and more efficiently. Our team of clinical and hygiene specialists support the project through all phases of development, from planning through to occupancy, which allows healthcare staff to remain focused on their core competency, serving patients-residents.
Our Approach

**Smart Design**
Our specialists speak the language of architects and builders. We bring an understanding of design-build thinking, processes and constraints. We have extensive operations experience and have worked in healthcare, alongside medical, clinical and operations staff. We know the clinical requirements and speak the language of operations. We bridge the gaps of understanding, facilitate enlightened thinking and offer proactive and practical solutions.

**Scalable Focus**
Each phase of the facility development process has unique requirements. We bring the right amount and skill set of expertise to your project, when it is needed. From a quick phone call or email inquiry, to on-the-ground oversight and inspection, we provide the right people, at the right time, in the right manner to fit the need and the budget.

**Leading Practice**
Healthcare facility development projects do not happen every day, so it is vital to the healthcare organization that the end result is a facility that delivers on the promise of transformative healthcare to the community they serve. Research into infection prevention through better facility design and hygiene is ongoing and every day there are innovations in smart-design, products, surfaces and furniture coming onto the market. Our team brings awareness of emerging trends, innovations, current best practice and proven concepts in facility design, finishes, furniture and equipment.

Opportunities

**Planning & Design**
Working with Architects and Healthcare providers, we bring an understanding of ultimate goal, a facility that delivers on the organizational objective, while working within real-world constraints, such as: time, budget, space, codes, etc.

**Construction**
Supporting Builders and Healthcare providers, we bring an appreciation for the concerns of worker and patient safety, and the need to get the job done, on-time as well as within budget. We know that hospital infections and germ transmission can raise concerns to those who are unfamiliar with infection control.

**Commissioning**
As the facility development project nears completion, Clinicians and Administration teams turn their attention towards building commissioning and opening the facility. It is vital that the transition is seamless, usually “the clock is ticking”, with time pressures on both sides to complete hundreds of details and final stage tasks.

Project Applications

Hospitals • Long Term Care Facilities • Clinics • Ambulatory Care Centers
Green Field Construction • Occupied Facility Renovations • Facility Repurpose and Renewal

Our Capabilities

**Hygiene Performance Solutions (HPS)** is the leading provider of environmental hygiene and infection prevention & control performance improvement services.

- We specialize in performance improvement coaching to the healthcare community
- We support in-house operated, environmental hygiene, infection prevention & control, and support services teams
- We enable your team to achieve a higher level of performance, faster

The HPS network of environmental hygiene operations and infection prevention experts bring years of proven capabilities and experience to your project. Our “boots-on-the-ground” coaching service provides healthcare executives with an independent assessment, industry proven tools and self-created solutions. Our team becomes a support and performance enabler for your team. We align our coaching team and tailor our approach to your culture and organizational priorities.

Our team of experts cover the full range of patient-safety, clinical, infection prevention and control, workplace safety, operations, performance analysis and strategic planning specialties.

We are incorporated, fully insured and can provide a resume of successful engagements.

Mark Heller, MBA
President and Subject Matter Expert, Environmental Hygiene & Healthcare Support Services

- Over 25 years’ experience leading environmental hygiene operations across Canada and the USA
- Unprecedented practice-insight in environmental hygiene, workforce training and healthcare operations at over 570 healthcare facilities (acute, long term care, ambulatory care) from coast to coast
- Formative executive leader of North America’s largest publicly operated environmental services organization
- National chair of the Environmental Hygiene Interest Group – Infection Prevention and Control - Canada
- Member: Association for Professionals in Infection Control and Epidemiology (APIC), Society for Healthcare Epidemiology of America (SHEA); Association for Healthcare Environment (AHE); Healthcare Financial Management Association (HFMA); Infection Prevention and Control (IPAC) – Canada; Canadian Healthcare Engineering Society (CHES)

“Healthcare leaders and physicians are increasingly mindful about the importance of infection prevention and control, through facility design and hygiene, as a critical component of patient-resident safety. Patient-resident focused care is at the very heart of vision and mandate of the healthcare organization and a well-designed and hygienic healthcare facility enables a safe environment for patients, residents, visitors and staff. Facility development is not a core competency of most infection control professionals and environmental hygiene leaders, who must keep remain vigilant on daily operations.”

**Services that support facility planning and design include:**
- Review of Drawings
- Risk Assessments
- Selection of Finishes, Furniture & Equipment
- Regulatory Confirmation

**Services that support facility construction include:**
- Worker Training
- Barrier Controls Planning
- On-Site Inspections

**Services that support facility commissioning include:**
- Post Construction Cleaning
- Pre-Occupancy Disinfection
- Deficiency Inspections

**Members:**
- Association for Professionals in Infection Control and Epidemiology (APIC), Society for Healthcare Epidemiology of America (SHEA); Association for Healthcare Environment (AHE); Healthcare Financial Management Association (HFMA); Infection Prevention and Control (IPAC) – Canada; Canadian Healthcare Engineering Society (CHES)
