

## Installation Instructions Drain Donut

### Remove grate from drain inlet:

Put attached cord on drain donut through grommet holes folding the doughnut edges underneath the grate.

Tie the edges to the underneath side of the grate.  
(See Picture)

Drain Donut opening should be centered in the middle of the grate.

This forms a 8 inch opening on top of the grate.

When the Drain Donut is centered, it forms a raised inlet opening allowing sediment to build before passing through the inlet hole.

Attach or place a snake bag in front of the back inlet of the drain to catch and filter any sediment that does not go down the drain doughnut opening.

Sweep away any sediment buildup on the Drain Donut and dispose sediment back onto the job site.
