

Dr. Campos graduated from the University of Florida College of Veterinary Medicine. He has been working at Pasco since graduation. He enjoys challenging cases in dermatology, internal medicine, reproduction and surgery. He has a special interest in the management of obesity cases in both felines and canines.

Winner of the American Veterinary Medical Foundation "America's Favorite Veterinarian" 2013. Tampa Bay Business Journal, "2014 Health Care Hero Awards Finalist".

He is the current President of the Suncoast Veterinary Association. He has served in the Animal Services Advisory Council for Pasco County since 2004. He is also a 3rd Degree Knight with the Knights of Columbus, Council 5869.

Dr. Campos learned about the ClotIt® all natural mineral compound at the American Veterinary Medical Association (AVMA) in July 2014. He was interested in trying this innovative hemostasis product because it stops bleeding fast and is all natural and gentle on pets. He has reported success using the ClotIt® minerals in various applications and believes it would be a good tool for use in the following types of applications:

- Soft palate
- Ear hematoma
- Nail trim
- Bleeding tumors
- Bleeding elbows
- Dental procedure(s)

A couple recent examples are below:

Dew Claw Removal:

Recently, Dr. Campos used the ClotIt® mineral compound on two 3-day old Mi-Ki puppies for their dew claw removal. The options that Dr. Campos considered for the case included surgical glue vs the ClotIt compound. Dr. Campos decided to use the ClotIt® all-natural mineral compound for the case and applied it to the dew claw area to stop bleeding on the digit/incision. It took 45 seconds and the bleeding stopped. The situation was completely resolved and hemostasis was achieved. "The product worked great!" according to Dr. Campos. He also commented that the product appeared to be safe.

Soft Palate Application:

Another case presented itself with a 10 year old English Bulldog (neutered male) named Bosco. This patient had an elongated soft palate and symptoms included severe raspy and crackly sounds from his upper airway. The treatment option was laser soft palate surgery and Dr. Campos utilized ClotIt® mineral compound to stop the bleeding on the back of the palate. He applied ClotIt® during the surgery, and within 45 seconds the bleeding stopped and complete hemostasis was achieved. Dr. Campos said, "The ClotIt® product worked great and appeared to be safe even in the back of the mouth."

These are just two compelling examples out of all the applications that ClotIt compound can assist to stop bleeding fast and achieve hemostasis in veterinary cases while still being gentle on the animals.
