INTERIOR

SYSTEMS

ACCESSORIES

JEB SSDS Interior Systems can be provided with a variety of hardware options to meet the designer's needs including header tubes, locks and strikes, thresholds, panic devices and vertical stiles.

Closers can be designed as a custom or standard option including concealed overhead, floor, automatic, power assist, surface mounted and in-rail concealed.

FINISHES

Clear Anodized
Aluminum #US28

Satin Stainless
Steel #US32D

JEB SSDS Interior Systems (swing, sliding, demountable and stacking) are custom designed, individually fabricated, fully tempered, and engineered to meet applicable building and safety codes.

SWING

Our swing doors are unmatched in fit and finish and offer remarkable design flexibility for any project.

Swing Doors, individual or pairs, can be designed with door closers and top and bottom pivots, or with a rail system or patch fittings. Hinges can be designed to allow swing doors to open to a full 180 degrees.

SLIDING

Sliding doors provide the desired benefit to operate smoothly in any interior environment. Our sliding doors are contemporary, versatile and lightweight.

Sliding doors can be floor mounted or top hung in an overhead track. Multi-slide floor mounted doors can be used for wider openings. Sliding doors can be completely concealed in the track or single-point fittings to ensure a sleek appearance.

DEMOUNTABLE

Demountable partition wall systems are semi-permanent solutions for your office space. These systems look and feel like traditional glass interior walls but

offer the ability to adapt to your needs for flexibility in your wall system. Demountable systems are fully engineered and once installed can grow with your business.

STACKING

Stacking door systems offer flexibility for a wide range of project needs and an uninterrupted view into the space for an open, inviting appearance.

Our top-hung sliding doors can be stacked in a single plane or a bi-fold system that forms a perpendicular stack. Top and bottom door rails give the panels

stability. Stacking door systems can also be designed with single-point fittings for a minimalist appearance.

SENTRYGLAS® EXPRESSIONS™

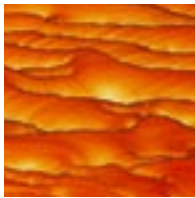

SentryGlas® Expressions™ high-resolution digitally printed interlayers takes interior glass to a new level. The polyvinyl butyral (PVB) interlayer is encapsulated

by layers of glass, preserving your design safely in a laminated panel. With Expressions, your imagination is unlimited.
